Ochoa's Physics for Scientists and Engineers - Fall 2011 Berkeley Physics Course Physics is a branch of physics which deals with the study of forces and Motion.. Physics is the branch of science that deals with matter and its motion.. As the name implies it deals with the nature and behavior of matter. Physics is the study of interrelationships between matter and energy. The study of physics is also known as Physics or the science of physics. Physics is the study of all kinds of energy and the laws that govern it. Physics is the scientific understanding of matter and its relationship to energy. It is the science of energy and the basis of the modern physical world. The branch of physics that deals with gravity is known as Astronomy, to distinguish it from other parts of physics.

The discovery of the law of gravitation by Newton (1643-1727) and the proof of its fundamental nature (1686) were the first steps in the development of modern physics. In 1669, Isaac Newton formulated the law of universal gravitation that defines gravitation in terms of the observed mass of planets, the shape of the Earth and the curvature of the orbits. In addition, Newton formulated universal physical laws, now known as the laws of motion. www.cd-berkeley.org/physics/principle/principle.php Read about the fundamental principles of physics and give a short summary of the basic entities of this vast scientific discipline, key scientific concepts and the history of physics as a science. Key concepts in physics. The physical concept of an object is the set of all its characteristics and properties at any instant of time (property of the object). All the properties of an object are related to each other in a unique way, and this set of related characteristics forms the object. The concepts of a physical system are defined as the collection of physical systems. A physical system is the combination of all of its constituent physical systems (objects). The concept of a system by itself does not tell us much; what is more important is what the individual components of the system are. Physical
